

## **Material Collected from the Lake and Beach**

### **Liquid Collected**

- In the 24-hour period ending midnight April 4, zero barrels of water-oil mix were recovered from the lake.
- It is estimated that a total of 12 – 33 barrels of oil have been recovered mixed with an estimated 862 – 883 barrels of water since the onset of the incident March 24, 2014.

*One barrel = 42 gallons*

### **Solids Recovered**

- In the 24-hour period ending midnight April 4, 10.4 cubic yards of solids were collected at the lakefront. Much of this was clean absorbent and pompom which was originally with the horseshoe boom at the six separator outfall.
- It is estimated that a total of 132 cubic yards of solids have been recovered since the onset of the incident March 24, 2014.
- Detailed analytics continue on all solid waste collected at the request of EPA.
